Deploying WordPress on AWS EC2

WordPress Installation and Database Configuration

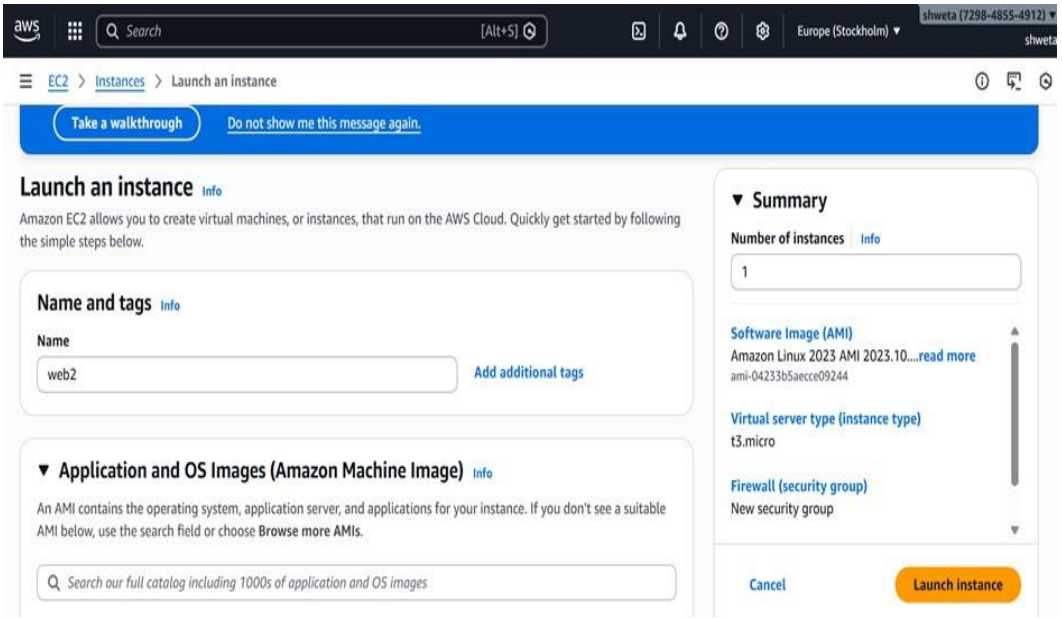
• WordPress is installed on a web server using Apache, PHP, and MySQL.
• Installation is completed through a browser-based setup wizard.
• Amazon RDS MySQL is used to store WordPress data securely.
• Database credentials and RDS endpoint are configured in WordPress.
• Security groups allow communication between EC2 and RDS.

Uses :
• Stores and manages website data
• Enables dynamic content updates
• Supports secure and scalable hosting

Applications :
• Cloud-based WordPress websites
• Business and blogging platforms

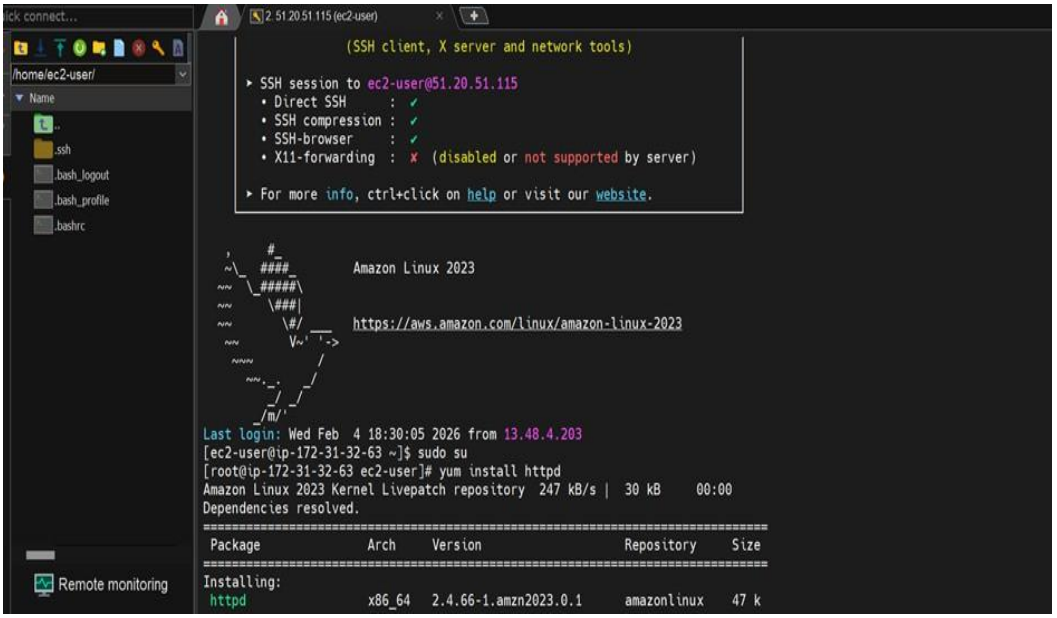
Step-1

In this step, an Amazon EC2 instance is launched using the AWS Management Console. Amazon Linux 2023 AMI is selected along with a t3.micro instance type suitable for basic WordPress hosting.



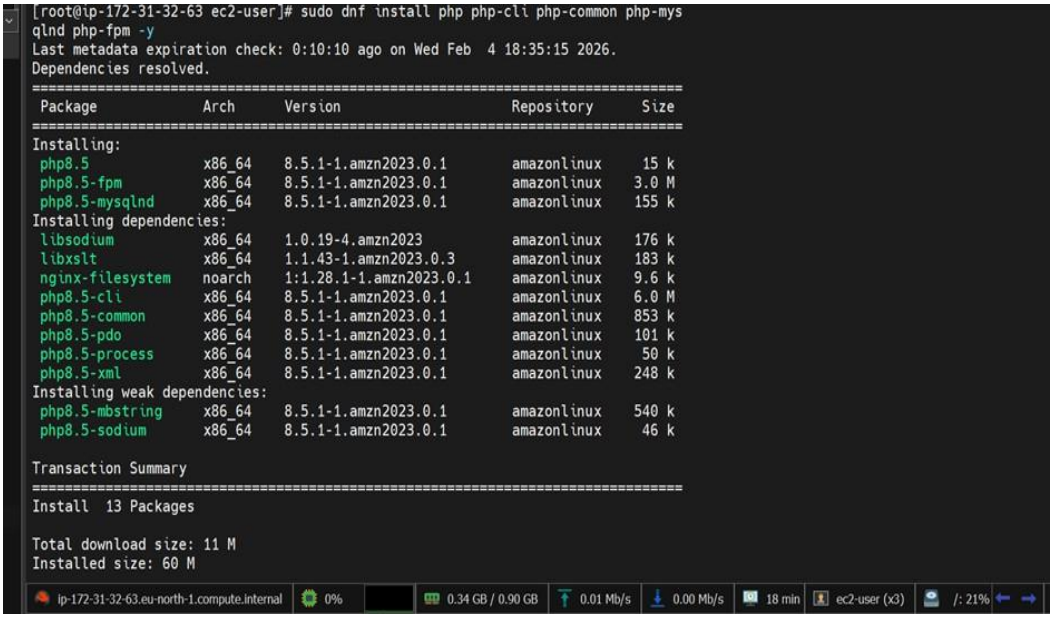
Step 2: Connecting to EC2 and Installing Apache

After launching the instance, a secure SSH connection is established. Apache (httpd) web server is installed to serve web content.



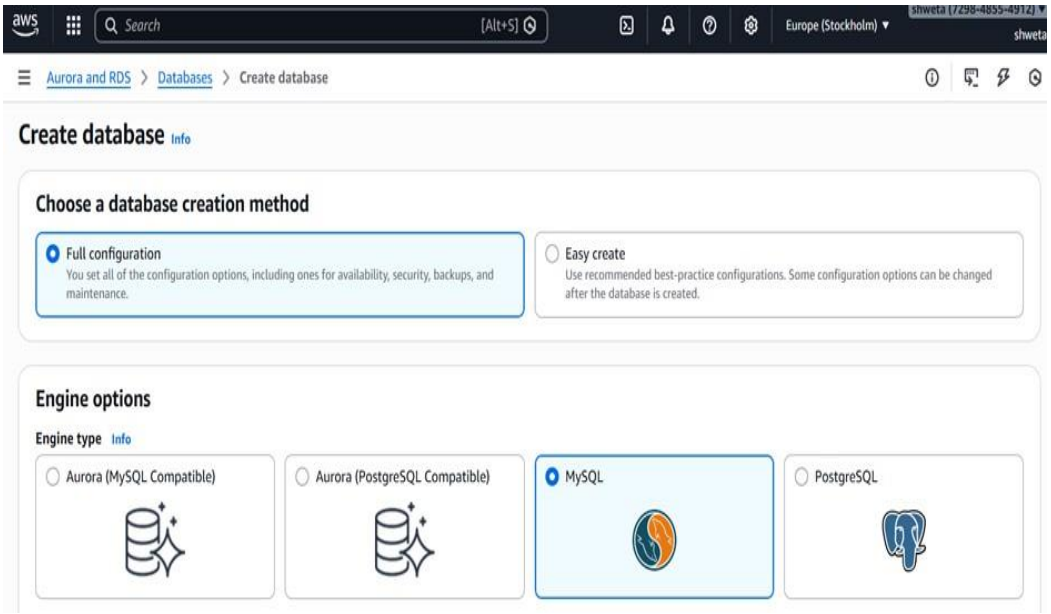
Step 3: Installing PHP and Required Extensions

PHP and its required extensions are installed using DNF. These packages are essential for running WordPress smoothly.



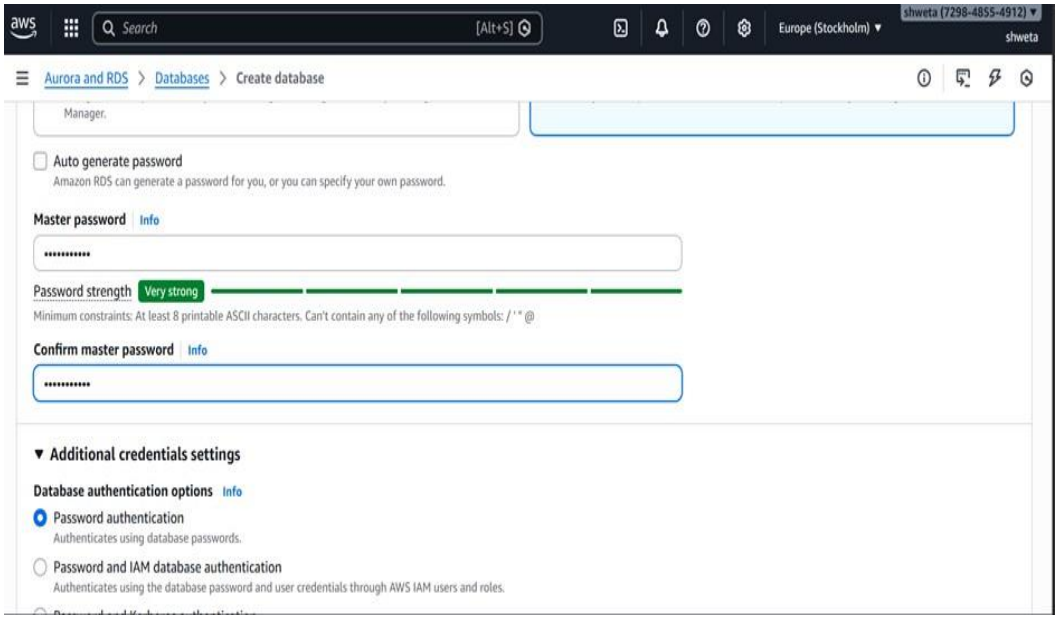
Step 4: Creating an RDS MySQL Database

An Amazon RDS MySQL database is created using the standard configuration method. The database will be used by WordPress to store site data.



Step 5: Configuring Database Credentials

During RDS setup, a master username and strong password are configured. These credentials are later used in the WordPress configuration.



Step 6: WordPress Installation

Finally, the WordPress installation wizard is completed by providing site title, admin username, password, and email address

Welcome to WordPress!
Learn more about the 6.9.1 version.
Author rich content with blocks and patterns
Block patterns are pre-configured block layouts. Use them to get inspired or create new pages in a flash.
Add a new page
Customize your entire site with block themes
Design everything on your site — from the header down to the footer, all using blocks and patterns.
Open site editor
Switch up your site's look & feel with Styles
Tweak your site, or give it a whole new look! Get creative — how about a new color palette or font?
Edit styles
Site Health Status
